Despite macOS being a mature operating system, the new version macOS Mojave (10.14) contains a bunch of new features. Some of the new features covered include Dark Mode, Screenshots & Markup, and the redesigned Mac App Store.

Besides the new features there are some major changes too including ones to Finder, Safari, and using unique passwords on each website. There are also four brand new applications that are coming from iOS. We look at these in-depth. These apps are Stocks, News, Home, and Voice Memos.

Server Administrators see some big changes with macOS Mojave and these are covered as well.

For Developers we cover Xcode changes include performance improvements, object libraries, editing enhancements, and code folding improvements. We look at implementing Dark Mode within your apps, Notarized apps, and implementing Finder Actions.

There are some new frameworks that are covered as well. These include the Network Framework, Natural Language, improvements to CoreML and a related framework called CreateML.

For web developers we cover MapsKitJS, MusicKitJS, and secure loading of content.

No Apple developer book is complete without a discussion of the changes around Apple's own programming language, Swift. We cover some of the recent changes as well as some future ones.
