Education is the foundation for everything that we do in life. The more education that we have the more prepared we are for the future. This has never been a more true statement when it comes to technology. At our present development in technology our kids know more now than we did twenty or thirty years ago. But the problem is that they know more about how things work more than why they work.

This is where the Raspberry pi comes into play. It is the first computer that fits in the palm of your hand and costs less than \$40.00. Designed as a teaching tool the raspberry pi has taken on a life of its own. Transforming from an educational tool for children to a technology device that has taken on a life of its own.

In this book we will explore the raspberry pi and what it can do. We will talk about all the different features and why you need to get yourself one. Then finally we will give you real world examples of what others are doing with the raspberry pi and give you the tools, tips and techniques to go out there and build your own.
